Reasons for Allowance

The independent claims recite a reception control circuit and a path searcher with a limitation for the following:

"a path searcher that combines power addition values respectively corresponding to the plurality of directional patterns of the signals received from the reception direction control circuit to determine a power combination value"

The prior art of record teaches a beam former (reception control circuit) and a path selector. However, the path selector does not receive power addition values from the beam former as required and recited in the limitation. New search updates revealed no other prior art which teaches the limitation in the context of the claims. Therefore, claims 9-13 are indicated allowable.
